

I am TOTALLY opposed to ANY service (e.g. BPL) that produces unrestrained RF noise over any large range of frequencies that destroy the use of a PRESENT USER, especially a user that will be harmed extensively such as AMATEUR RADIO HF licensees. BPL is a fine idea, but must be used on shielded cables to prevent uncontrolled unwanted radiation that will pollute the receivable HF frequencies for Amateur Radio users, and other users of this spectrum who presently offer useful service to the Citizens of the United States.
